Project Members:
Justin Kieu, Louis Yang, Sheng-Hung Hung

Project Report 2

1. What have you accomplished this week? (Specify what each person has done)

Sheng-Hung found an official tutorial to help us get started with setting up the GAN model for us to implement our algorithm with. He had already tried running the sample code that was on this website. Justin and Louis both looked through the website to understand the tutorial and run a sample code to see what results were produced. We all came back together and discussed the results and agreed that this would be helpful in setting up our final algorithm. For the next step, we will attempt to create our own GAN model in the next week.

2. Any challenges you faced during this week? If so, how are you planning to resolve it? Any solutions or ideas?

We didn't run into too many challenges during the week. We had some problems with initially setting up the tutorial, but were able to resolve it together since Sheng-Hung had set it up prior to our meet up.
